DATE: September 29, 2017

TO: Tom Hiznay, Development Services Natural Resources

FROM: Tony Alhomsy, P.E., EPC-Water Management Division

SUBJECT: Addendum to EPC Comments for RZ 17-0510

Please consider this addendum to EPC's August 30, 2017 comments on the revised Land Use application:

The top of page three of the revised narrative indicates the proposed spray field site "has a seasonal high water table of 20 to 40 inches for 2 to 6 months then recedes to a depth of less than 60 inches outside of the rainy season. Thus, the project should meet a 24-inch separation from ground water even before re-sloping the site." Please note that the water table varies throughout the site, with the water table 8-10 inches below surface toward the west and 18-20 inches on the eastern part of the site. This was noted in EPC's review of the April 19, 2017 Septage Management and Land Application permit application and included in our May 19, 2017 Request for Additional information, item 3.ix., sent to Mr. Hoffman and copied to his engineer and Development Services. This item will be further reviewed by EPC for compliance with applicable Florida Administrative Code rules once and if we receive a new application for the spray site.
